Electronic Medical Records Systems Selection

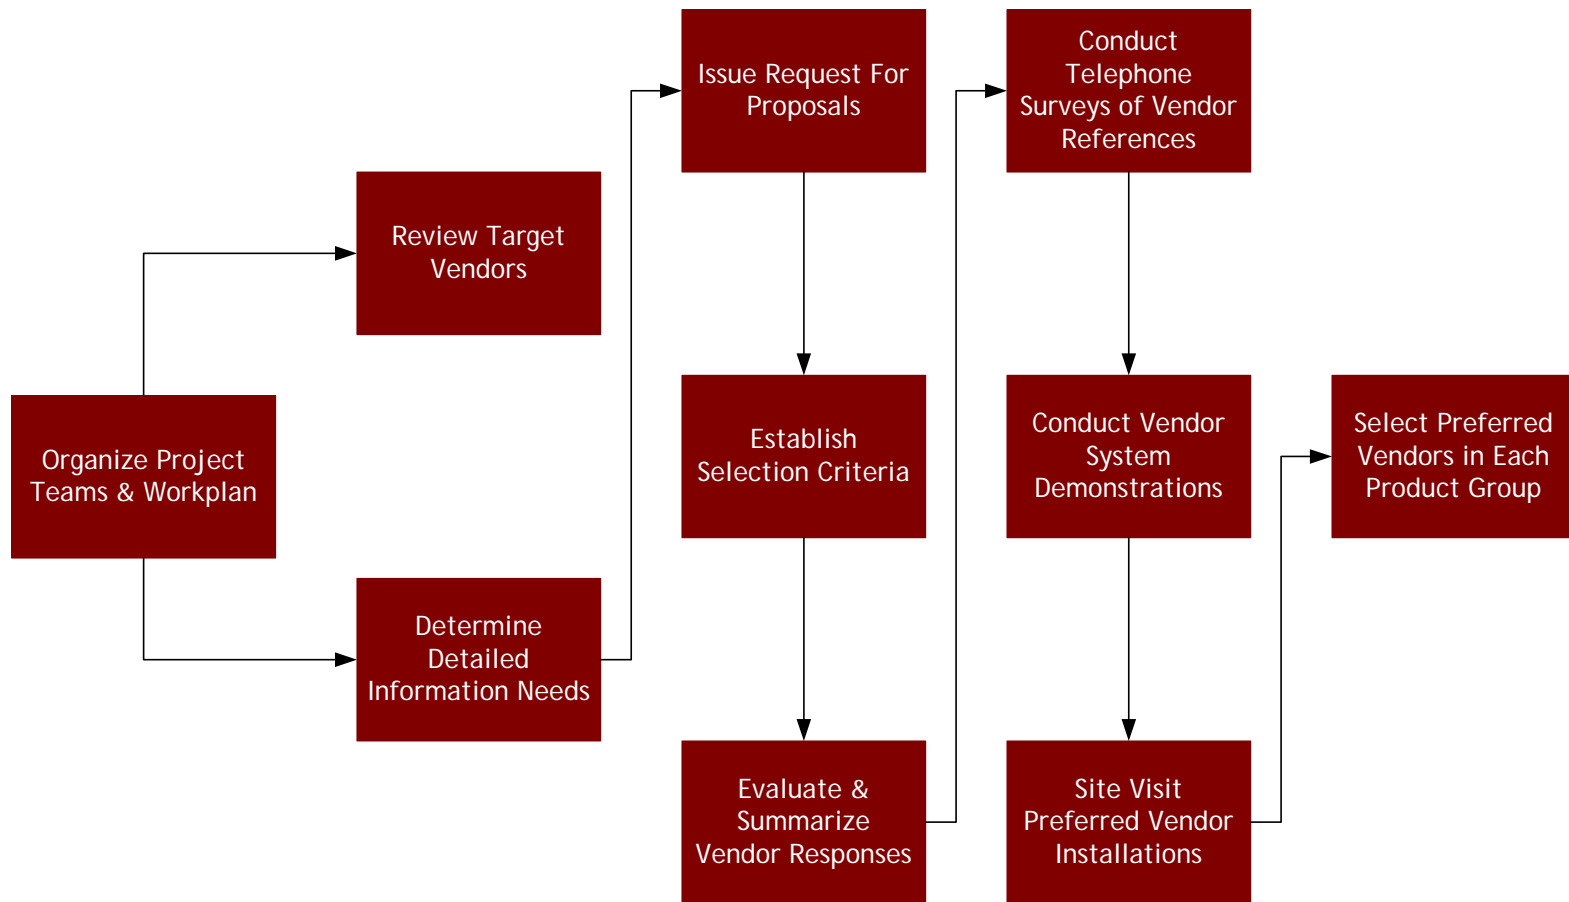

Vendor Proposal Analysis

May 2004

Key Guidelines for MVIPA System Selection & Evaluation:

- Evaluate vendors' ambulatory Electronic Medical Records (EMR) systems along with other Practice Management products
- Evaluate and select three vendors on an IPA-wide basis to facilitate I/T integration and management
- Review both local and centralized systems' deployment options
- Evaluate vendors' system capabilities even though they may be acquired and installed at a later time

Multi-phased Approach to Complete the System Selection Process

Key Guidelines for System Selection & Evaluation:

- Minimum number of current clients (e.g., 25)
- Proposed products must have been installed a minimum of 18 months in marketplace
- Full EMR product integration (single hardware/software platforms)
- Industry standard technology architecture (Graphical User Interface, Web enabled, relational and non-proprietary data base)
- Adequate firm size and financial resources (e.g., \$50 million in annual revenue)
- Ability to support IPA-wide EMR and other functions

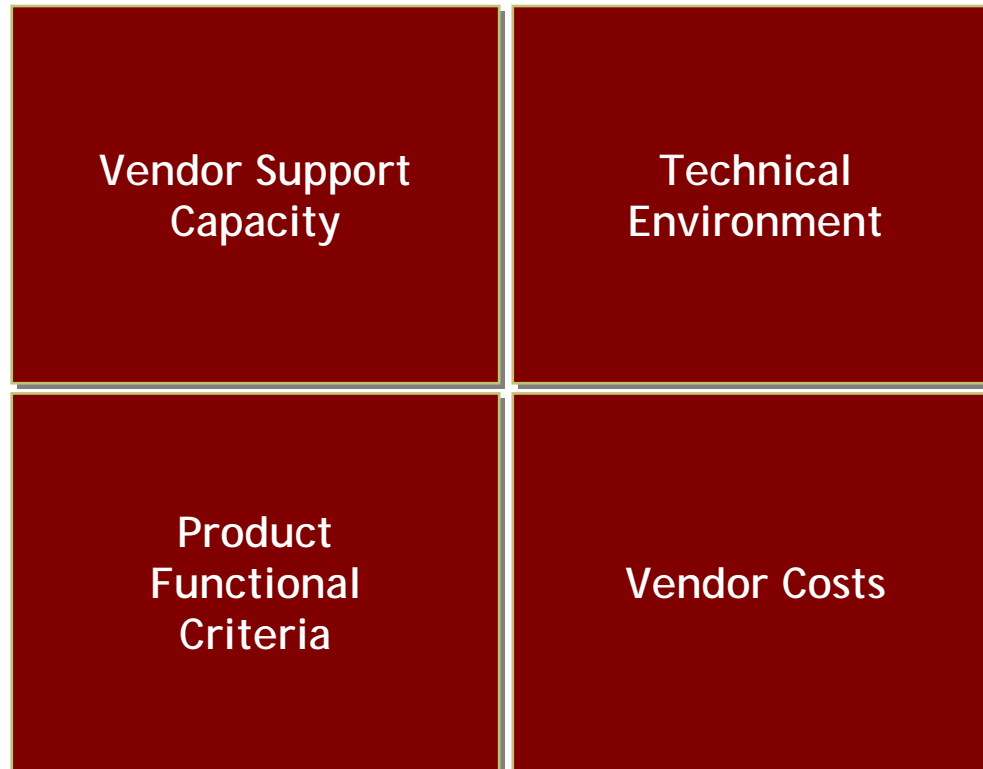

The RFP was sent to twelve (12) Electronic Medical Records vendors. The results of the vendor proposal evaluations are presented in this document.

- Alteer (declined to bid)
- A4
- Cerner
- Eclipsys
- Epic
- GE Medical Systems

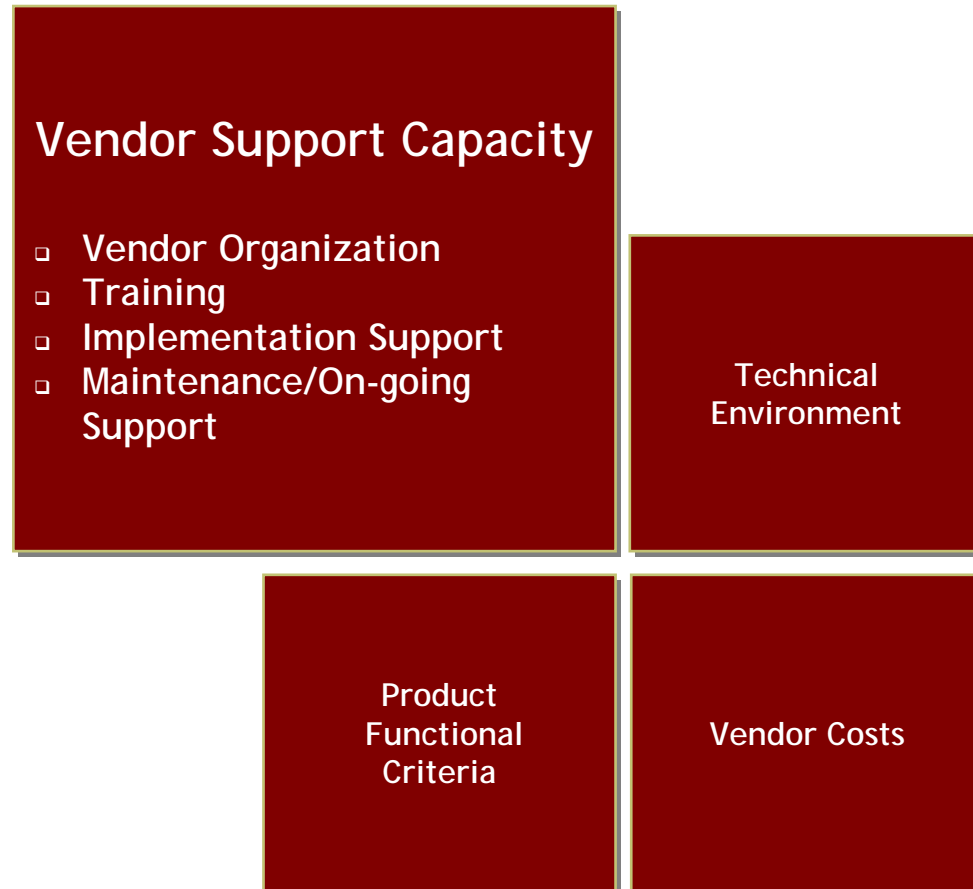

The RFP was sent to twelve (12) Electronic Medical Records vendors. The results of the vendor proposal evaluations are presented in this document.

- IDX
- McKesson
- NextGen
- PMSI
- Siemens
- WebMD

TECHNOLOGY				
Hardware Platform	Dell Poweredge 1600 SC Server	Compaq or IBM servers	Intel Pentium servers	IBM pSeries, Sun, HP 9000, HP Integrity, & HP AlphaServer
Database vendor for proposed products. More than one DBMS for other Practice Mgmt Applications?	Oracle, Clinical & Financial App's reside on one DBMS	Oracle, Clinical & Financial App's reside on one DBMS.	SQL Server 2000 Practice Mgmt DBMS Unknown.	Cache-based RDMS, Clinical & Financial App's reside on one DBMS.
Network Protocol	TCP/IP	TCP/IP	TCP/IP	TCP/IP preferred, FTP, LU6.2, MQ Series supported
Server Operating System	Windows 2000 for Server	IBM AIX for Server	Microsoft 2000 Server for EMR IBM AIX for Scheduling & Billing applications.	Unix based, HP-UX, AIX, Tru64, Solaris, RedHat, Win2003.
Programming Language	Delphi, C+ & XML	Visual Basic & C++	Visual Studio .Net & C++	Visual Basic, C++ & Cache's ObjectScript
Client Server Architecture	Yes	Yes	Yes	Yes
LAN/WAN requirements - vendors supported	Any config compatible with Windows and Oracle. LAN to WAN support over wired/wireless Ethernet using TCP/IP protocol.	Any LAN/WAN solution that supports TCP/IP protocol.	Servers must have a 100-Mbps or faster NIC Clients must have a 10-Mbps or faster NIC WAN supported	Standard Ethernet LANs switched 100Mb or 1GB Ethernet. Requires use of TCP/IP protocol.
Capabilities & Restrictions - level of data integration inherent to the system & to other applications.	Full integration of systems, which communicate w/out interfaces.	Full integration of systems, which communicate w/out interfaces.	EMR is not integrated with Eclipsys Practice Mgmt products.	Full integration of systems, which communicate w/out interfaces.
Client PC requirements - recommended for quick response time - not minimum configuration	Unclear – future assessment needed.	Minimum: PIII 600 128MB 1GB free HD 1024x768res Winsock 1.1 TCP/IP protocol stack	Minimum: PIII 1-GHz 256MB RAM 1.5GB free HD 10Mbps for wired 802.11b for wireless WIN2000 SP2 or later	Minimum: PIII 733 128MB Recommend: P4 2.4 512MB

	A4	CERNER	ECLIPSYS	EPIC
Internet Browser requirements -if a web based application	IE 6.0+	IIS, IE 6+	IE 6.0+	IIS Web server, IE 6+ for clients
User defined report capabilities - Report Writer used	Reporting Module generates reports based on user-defined criteria. No ability for users to customize layout of screens & reports.	Customized reports using proprietary Discern Explorer product, created by user, or by Cerner at additional cost.	SunriseXA bundled with Crystal Reports.	Clarity/Analyst Enterprise Reporting System, and SQL Report Writer/ODBC Access Data queried on separate server at any time.
Encryption / Security	Typical Windows Server level security.	Typical Windows Data field level security.	SunriseXA: SSL encryption capable.	Typical Windows Server level security.
Proposed hardware/ system/ concurrent user configuration Scalability or limitations	User limit based on hardware config.	Oracle provides concurrency control. Proposed system assumes a 3% growth over 5 years for both hardware and data retention.	No limits, depending on hardware config. Implemented Sizing is based on concurrent users for 3 years and allows for growth at a rate of 15% per year.	Unlimited online data retention capabilities. Scalability depends on hardware config.
Data import and export tools	Out-of-the-box Reporting Module exports only to various file formats.	Import/export via HL7 interface.	Via supported HL7 interfaces. SunriseXA incorporates Crystal Reports for all report writing capability.	Wide range of import/export options and interfacing using SQL, Analyst Transport Data, Excel, etc.
Fail-Safe data Storage method supported by tech infrastructure i.e. redundancy, mirroring	VPN-based backups to off-site location w/ ASP to provide remote access to your data and application in event of local failure.	Competent/Proactive DBA, Mirrored disk farm, Clustering, Oracle Parallel Server, Oracle Hot Standby.	Use Microsoft Cluster services for failover/redundancy on the master database.	Disk mirroring, redundant network controllers/power supplies, 24x7 availability.
Screen customization capabilities and products used	Limited direct user system customization support tools.	Screen customization is available using Cerner's Discern Explorer.	SunriseXA's GUI is stationary, but allows user customization.	Variety of methods that do not require custom programming.

	GE	IDX	MCKESSON	NEXTGEN
TECHNOLOGY				
Hardware Platform	Intel Pentium Based Servers	HP NonStop S7600 parallel servers (formerly Tandem). Assumes Salem Hospital hosted using Carecast product).	Horizon Ambulatory Care supports both IBM and HP Unix servers for Oracle. The Web applications servers operate on IBM servers running Linux.	IBM Xseries 4 Processor CPU
Database vendor for proposed products. More than one DBMS for other Practice Mgmt Applications?	Oracle for EMR, Practice Mgmt DBMS Unknown.	HP NonStop SQL DBMS	Oracle	MS SQL Server
Network Protocol	TCP/IP	TCP/IP	TCP/IP	TCP/IP
Server Operating System	Win2000 Server or NT	HP Non-Stop Kernel OS	HP-UX version 11.0 or IBM AIX Version 4.3.2	MS Win 2000 or XP
Programming Language	No Response	Cobol	Java	No Response
Client Server Architecture	Yes	Yes	Yes	Yes
LAN/WAN requirements - vendors supported (LAN to WAN supported	Recommend: Ethernet 100Mbps	802.3, 802.5, 802.11 (LAN) or a high speed WAN connection	Ethernet or other
Capabilities & Restrictions - level of data integration inherent to the system & to other applications.	EMR is not integrated with GE's Practice Mgmt or Hospital IT products.	Assumes use of Carecast Hospital based products. Did not propose Ambulatory EMR. IDX offers Practice Mgmt systems (Groupcast and Flowcast, on separate HW/SW platforms.	EMR is not integrated with McKesson's Practice Mgmt (Practice Plus) or Hospital IT products.	Clinical and financial modules appear to be fully integrated. NextGen does not offer an HIS product.
Client PC requirements - recommended for quick response time - not minimum configuration	PII 233+ MHz 128MB RAM 4GB+ HD NT/2000/XP IE 5.5 (SP2)	Recommend: 1 GHz + 256MB Win2000/XP Winsock 1.1	PIII 700+ 256MB RAM Win 2000/XP .Net 1.1 IE 6 WMPlayer 9	Thin or fat PC client configurable. Did not specify workstation requirements.

	GE	IDX	MCKESSON	NEXTGEN
Internet Browser requirements -if a web based application	Unclear	Carecast is Web-based Recommend: I.E. 6.0	MS .Net Framework and IE 6	Can operate as “web-enabled” application utilizing IE 4.X+ and/or Netscape 4.X
User defined report capabilities - Report Writer used	Crystal Reports or other SQL product..	Carecast Reporting Engine	Proprietary ad hoc reporting tool, Clinical Query.	Reports are user-definable via Crystal Reports
Encryption / Security	Windows server level security.	Windows server level security	Windows server level security. 128bit over public Internet	Windows server level security
Proposed hardware/ system/ concurrent user configuration Scalability or limitations	No limit to concurrent users.	No restriction to Carecast database size. Very scalable system.	Config. of multiple CPUs.	No concurrent user limit. .
Data import and export tools	LinkLogic a proprietary data exchange engine, supports HL7 and ASTM.	Carecast: extracts data from Carecast into Windows SQL Server database.	Data Imported into Horizon Ambulatory Care.	Import/export to any system that accepts a direct interface or defined data using a national standard protocol.
Fail-Safe data Storage method supported by tech infrastructure i.e. redundancy, mirroring	Recommend the use of RAID0+1 disk subsystems	NonStop Kernel OS and Carecast apps provide full backup and recovery with no scheduled downtime.	Multiple CPU web-arrays provide redundancy.	Recommended hardware supports hot swapping of drives.
Screen customization capabilities and products used	End-user’s may customize encounter forms, letter templates, protocols, patient handouts, and user preferences (screen views).	Screen Builder utility: tailor screens to contain desired data items, specify required fields, display only fields and screen input edits.	Does not allow customization of front end screens by user.	NextGen’s tool kit permit a high degree of configurability.

	PMSI	SIEMENS	WEBMD
TECHNOLOGY			
Server Hardware Platform	Intel Dual Pentium based Servers.	IBM Netfinity 5100 (2) for DB server, and Training server. IBM xSeries 330 Server for Terminal server.	Intel Dual PC Servers for less than 150 users IBM 6000 mid frame Server for greater than 150 users
Database vendor for proposed products. More than one database? (Q 3)	MS SQL Server or Oracle, Clinical & Financial App's reside on one DBMS.	MS SQL Server for EMR, Practice Mgmt DBMS Unknown.	Intergy- is WebMD's proprietary database. However, it is ODBC and SQL compliant.
Network Protocol	TCP/IP	TCP/IP	TCP/IP
Server Operating System	Windows 2000 or 2003 Server or Advanced Server	Windows NT or 2000 Server	IBM 6000 based server operates under AIX for large configuration. Smaller environment requires 2000 Server.
Programming Language	C/C++ & Visual Basic	C, C++ & Visual Basic	No Response
Client Server Architecture	Yes	Yes	Yes
LAN/WAN requirements - vendors supported	LAN extends to WAN over Ethernet 802.11b/802.11g only Switches not hubs	LAN extends to WAN	LAN/WAN is through standard protocols and utilizes the Network OS
Capabilities & Restrictions - level of data integration inherent to the system & to other applications.	Clinical and financial modules appear to be fully integrated. PMSI does not offer an HIS product.	EMR is not integrated with Siemens' Practice Mgmt (Signature) or Hospital IT products. Do not offer a Patient Scheduling system.	Clinical and financial modules appear to be fully integrated. WebMD does not offer an HIS product.
Client PC requirements - recommended for quick response time - not minimum configuration	Supports thin client configurations with Citrix MetaFrame or PC workstation with Windows XP or 2000 Pro	Supports thin client with Citrix or PC workstation with Windows XP or 2000 Pro.	PIII 600+ fat PC workstations or Thin clients workstations using Citrix

	PMSI	SIEMENS	WEBMD
Internet Browser requirements -if a web based application	IE 5.5+==	Windows 2000 on workstation	Web browser access not available.
User defined report capabilities - Report Writer used	Practice Partner is ODBC compliant, allows IT staff and end users to directly query the database to create custom reports using third-party tools.	Crystal Reports and/or MS Access utilizing SQL Data-Dictionary	Proprietary InfoPOINT ad hoc Report Writer is available. Capabilities unknown.
Encryption / Security	Typical Windows Server level security.	All but field level security.	Unclear, role based security controls.
Proposed hardware/ system/ concurrent user configuration Scalability or limitations	No concurrent user access limit.	Servers fully scaleable/expandable.	Servers fully scaleable/expandable.
Data import and export tools	Generic data loader for importing data. Exporting data: internal report writer can export virtually any aspect of the EMR.	Data can be exported to Excel or other MS based applications.	Medical Manager® software for outbound and inbound data exchange (HL7 interface).
Fail-Safe data Storage method supported by tech infrastructure i.e. redundancy, mirroring	Redundant disk storage (RAID 5), tape backup, and a hot spare fileserver.	Hot-swap or backup server, drive redundancy in RAID configuration.	Hot-swap or backup server, drive redundancy in RAID configuration.
Screen customization capabilities and products used	End user system customization is done within Practice Partner Patient Records using proprietary tools.	End users can not modify screens or database but can customize reports and output forms.	Highly end user customizable.

Vendor Costs
